

Security Hardening and Updates

Quarterly and Semi-Annual Plans
Are Available

Minimize Risk to Deployed Systems

- **Operating System Hardening.** Operating Systems (RHEL) are delivered in a hardened configuration, meeting your customer's requirements out of the box.
- **Periodic Security Updates.** Security updates are provided for systems that are deployed in the field in cooperation with on-site Information Assurance Representatives.
- **Ops Compatibility Verified With Every Update.** As part of the AMERGINT security update service, the software/hardware configuration for your systems is kept updated, and then re-tested using the same Factory Acceptance Tests to ensure the software functions to the level that was initially provided.
- **Cryptographically Signed Packages Prevent Man-in-the-Middle Attacks.** For Operating System updates, AMERGINT utilizes encrypted packages to ensure that the software package hasn't been interfered with from the source to the target machine.
- **Certification Support.** For complex certification scenarios, our security experts can provide detailed reports on the configuration, as well as detailed explanations of any exceptions to security standards required for the software to run.
- **Top Notch Security Expertise.** Our security staff consists of CISSP™ Certified individuals, focused on delivering solid security value in a timely manner.
- **Cutting Edge Security Technology.** We employ the latest in Security Content Automation Protocol (SCAP) Tools and benchmarks including CIS Security Benchmarks and DISA Security Technical Implementation Guide (STIG).
